

## BM62 Armchair

Designed By Børge Mogensen, 1958

The BM62 chair was designed by Børge Mogensen in 1958, based on a minimal, yet extremely robust construction. The structured design is, however, enriched with outstanding comfort and carefully crafted details, such as its exposed finger joints and seat and back in cane wicker. The chair's runner legs make it particularly suitable for use on carpets, but it can also be fitted with gliders.
